

CELIAC DISEASE SYMPTOMS

even on a *gluten-free* diet?

Consider Taking Part in Research of an Investigational Drug for Celiac Disease

The **CeD-LA-3001** study is for adults at least 18 years of age who have been diagnosed with celiac disease and are still experiencing symptoms despite following a gluten-free diet.

The purpose of this study is to see if the study drug reduces symptoms of celiac disease when taken with a gluten-free diet.

You may qualify if you:

- √ Are 18 years of age or older
- √ Were diagnosed with celiac disease
 6 or more months ago
- √ Are actively experiencing symptoms related to celiac disease
- √ Have been on a gluten-free diet for at least 6 months

- ✓ Are able to maintain a gluten-free diet during your entire study participation
- ✓ Are willing to follow a treatment plan of routinely scheduled study visits, lab tests, and other study procedures for the duration of the study (approximately 29 weeks)
